

Algorithm for Determination of MSPE Quartiles in the Class of 2024

Used to determine quartiles for MSPE; top quartile forwarded to AOA chapter as initial step in their nomination process; also carried forward, with additional Phase 3 criteria, in determining Graduation Honors. A student's MSPE quartile score is determined using the criteria for the class graduating in that year, not the class with which they matriculated.

Phase 1 Performance

44 pts max

Allocation of points for Phase 1:

- In keeping with P/F approach, students receive full phase 1 points with the following exceptions:
- Failure of a final Block course exam brings a deduction of 1 pt, with a maximum of 5 points deducted for exam failures in M1 year and 3 points deducted in M2 year for final exam failures.
- Failure of a course, due to repeat exam failure or other means, brings a deduction of 5 pts. If preceded by initial exam failure, the two deductions are not additive.
- The College Committee on Student Promotions determination of professional behavior issue requiring remediation = deduction of 5 pts per incident
- Failure of the USMLE Step 1 exam on initial attempt brings a deduction of 3 points.

Phase 2 Performance

56 pts max

There are 7 Phase 2 core clerkships: internal med, family med, peds, surgery, ob/gyne, psychiatry, and neurology.

Allocation of points for Phase 2:

- The core clerkships each yield a max of 8 pts: Pass =4, High Pass =6, Honors =8
- An initial failing grade for the entire clerkship yields 0 pts for that clerkship in the algorithm
- Unmet requirements, including initial clerkship subject exam failure and failure of the graduation competency exam, result in subtraction of 2 pts
- Failure of an elective clerkship or other non-core course during Phase 2 brings a deduction of 5 pts for a H-HP-P-F and 3 points for an S-U course
- The College Committee on Student Promotions determination of professional behavior issue requiring remediation brings a deduction of 5 pts per incident

100 points possible

*If a core clerkship is missing when the MSPE is generated, the student will receive the average score for the clerkships they have taken in place of the missing score. For example, if they have not yet taken pediatrics, and have received honors in 2 clerkships, high pass in 3 clerkships, and pass in one, they will receive 6.33 points for the missing pediatrics clerkship-- $[(2 \times 8) + (3 \times 6) + (1 \times 4)] / 6 = 6.33$.

* In addition, some students who matriculated in 2019 or prior had one of their core clerkships affected by COVID and graded on a credit/no credit basis and the above procedure for missing clerkships will be used
